Features:

- Back pressure-free condensate discharge even at extreme pressure- and quantity fluctuations
- Controller with integrated automatic ventilation (except Fig. 629/636)
- Robust and insensitive to waterhammer
- Non return protection (except Fig. 629/635)
- Union for pressure compension line and bypass possible (except Fig. 629)
- On-site change of the installation position is possible according to the operating instructions (except Fig. 629)
- The controller maybe changed without disturbing the pipe work (except Fig. 629)

Ball float steam trap (Stainless steel)

Fig. 629....2 with screwed sockets

Also as automatic air vent with inlet from the bottom useable (refer to Fig. 656)

Information / restriction of technical rules need to be observed!

Resistance and fitness must be verified (contact manufacturer for information, refer to Product overview and Resistance list).

Operating and installation instructions can be downloaded at www.ari-armaturen.com.

Informations about pipe welding		
Welding groove acc. to DIN 2559		
The material used for ARI valves with butt weld ends are:	1.0460	P250GH acc. to DIN EN 10222-2
Note:	1.4541	X6CrNiTi18-10 acc. to DIN EN 10088
Note restriction on operating pressure / inlet temperature depending to design!		
<p>Due to our experience, we recommend to apply an electric welding process.</p> <p>Because of the different material compositions and wall thickness of the steam traps and the pipe gas welding shall not be applied. Quenching cracks and coarse grain structure may develop.</p> <p>Steam traps with socket-weld ends shall only be welded by arc welding (welding process 111 acc. to DIN EN 24063).</p> <p>If during the time of warranty others than the manufacturer or by the manufacturer authorized persons are interfering in the product and/or the setting, the right of claim for warranty will lapse!</p>		

Selection criteria:	Example for order data:
<ul style="list-style-type: none"> • Steam pressure • Back pressure • Quantity of condensate • Flow medium • Nominal diameter / pressure • Type of connection • Material • Place of service or kind of steam consumer 	<p>Ball float steam trap CONA® SC, Fig. 634, PN25, DN25, 1.0460/1.0619+N, R14, with flanges, Face-to-face dimension 160 mm</p>
<p>Other installation positions than standard (vertical) have to be indicated together with the information about the flow direction i.e. inlet from left or right</p>	

Integrated non return protection

The internal plate acts at series 634 and 636 as integrated check valve..
In case of parallel installed heat exchangers or heater batteries the non return protection prevents a shut down heat-exchanger for flooding with condensate from the downstream side and reverse heating up.
A check valve which otherwise has to be installed is not necessary.

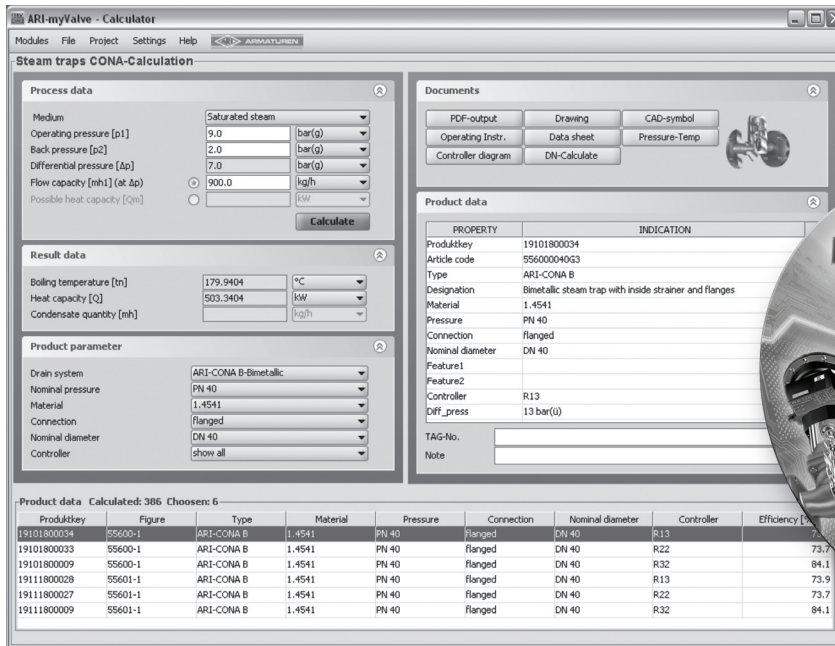

Installation with recovery pipe

Important:
The installation of a recovery pipe for gas return is always recommended; especially if the ball float steam trap is installed horizontally.

myValve® - Ihr VALVE Sizing-Program.

myValve is a powerful software tool that not only helps you size your system components; it also gives you instant access to all other data about the selected product, such as order information, spare parts drawings, operating instructions, data sheets, etc., whenever you need it.

myValve - Valve Sizing-Program
Contents:
Module ARI-Steam trap CONA-Calculation

- Sizing (calculation of steam trap systems with given flow capacity or heat capacity)
- Calculation of nominal diameter acc. to given pressure, condensate quantity, condensate sub-cooling and speed

Media:

- Steam (saturated and superheated)
- Compressed air

Special Features

- Project administration of the calculation and product data incl. spare part drawings concerning to project and tag number
- Direct output or calculation and product data in PDF format
- Product data could be taken for a direct order
- SI- and ANSI-units with direct conversion to another databank
- Settings with over pressure or absolute pressure
- All ARI products are integrated in one databank
- Direct access concerning to the product on data sheets, operating instructions, pressure-temperature-diagram and spare part drawings
- Operation in company networks possible (no complex installations on individually PC's necessary)
- Extensive catalogue extending over several product groups

System Requirements:

Windows operating systems, Linux, etc.

Information about the different installation positions (shown at Fig. 634 CONA SC)

Installation (see picture)

The ball float steam traps can be installed either in vertical (standard) or horizontal position. In case of horizontal installation please indicate whether the inlet is from the left or right side.

The steam trap can also be converted on site to match the different installation positions. Please observe the appropriate operating manuals.

The steam trap must be fitted with the direction of flow as indicated by the arrow on the body.

Enough clearance (refer to dimension S) for the removal of the hood shall be provided.

The steam trap shall preferably be installed at the lowest point of the system and the membrane capsule resp. the bleeding tube shall be installed in an upright position inside of the hood.

For the modification of the installation position observe the operating manual.

A modification of the installation position during the time of warranty shall be carried out by the AWH-Service or it shall be agreed between the customer and manufacturer.
