

TRUNNION MOUNTED BALL VALVES

TM SERIES

Engineered Valves For Pipeline Service Application

- Valves for oil & gas pipelines and other industrial applications
- Flanged or Butt Weld
- ANSI Class 150 thru 2500
- API 6D - Compliance
- 2, 3 & 1PC Welded Body Designs
- 3 Way and 4 Way Multiport Designs
- Size Range: 2" thru 56"
- Piggable Option

TM Series valves can be serviced in line while under full line pressure.

Flo-Tite manufactures an extensive range of Trunnion Mounted Ball Valves for a wide range of specific applications. In addition to our standard trim stock series valves, Flo-Tite offers a multitude of options and modifications including metal seated and cryogenic application designs.

Please contact the factory for more information on how Flo-Tite can help you to meet your most demanding application requirements.

Engineered for Heavy Duty Applications, Including:

- Natural Gas Storage
- Gas Transmission
- Dryer Service
- LNG, HRSG
- Measurement Skids
- Subsea; Oil Refinery
- Natural Gas Compressor Stations
- Desalination
- Petrochemical Plants
- CO₂ Service
- Pipeline
- Power Generation

High-Tech Design Features

Flo-Tite Valves & Controls is an industry innovator specializing in ball valves of all types, sizes, and configurations. Flo-Tite is committed to excellence in engineering, manufacturing, and customer service.

Relentless innovation by design is the very definition of Flo-Tite Valves & Controls.

The Flo-Tite TM Series valves are trunnion mounted, metal or polymeric seated ball valves. They provide excellent sealing properties over an extensive range of temperatures and pressures. TM Series valves are available in both full and reduced bore designs with a wide range of materials, sizes, and pressure classes offered. With such a large selection of options available, the TM Series trunnion mounted ball valves are the ideal choice for a variety of applications.

These valves conform to the requirements of ANSI B16.34, API 6FA, API 607, and API 6D among others. They are manufactured to the highest of standards and under a quality plan that complies under the requirements of API Q1 and ISO 9001. The factory is licensed to use the API 6D monogram on all valves manufactured.

The vast range of sizes, styles, pressure classes, and materials together with conformance to ANSI, API, and NACE specifications make these valves suitable for virtually all industrial, petrochemical, refinery, and oil and gas services.

Design Benefits

TM Series ball valves are designed and manufactured with a number of features that benefit end users of all industries. These valves are offered in a wide array of body and trim materials for severe and critical conditions. Flo-Tite TM Series ball valves are engineered for excellence and are different by design.

1. Double Block and Bleed

Seats are spring-loaded and seal individually on the upstream and downstream sides of the ball, whether the valve is in the fully open or fully closed position. The body cavity can be isolated from the pipe line pressure, and the body cavity can then be bled down or drained through a drain plug.

2. Protected Seat Springs

Non-Spring Protection

Spring Protection

TM Series valves are built with a seat spring protection structure that prevents impurities from entering the spring hole. This unique feature protects the spring from any damage and adds to the life of the valve.

3. Bi-Directional Sealing

$$A2 > A1$$

The spring-loaded seats on the upstream and downstream sides allow the valve to be sealed in two directions. Therefore, the valve can be installed in any flow direction during installation.

4. Automatic Cavity Relief

$$A3 > A4$$

5. Fire Safe Design

When the non-metallic seats are burned or diminished as in the case of a fire or unusually high temperatures, the seat retainer rings, due to force from the springs, will make contact with the ball and form a metal-to metal seal which can minimize internal leakage. Fire safe stem packing and body gaskets prevent external leakage. The TM Series fire safe design conforms to API 6FA or API 607. Upon request, an API 607 certificate can be provided.

High-Tech Design Features

6. Various End Connections

TM Series valves are available with various end connections. Flanged ends are commonly offered according to ANSI or DIN standards.

7. Secondary Emergency Sealing

In the event of seat and stem seal damage, emergency injection fittings can be used to inject sealant providing the valves with a temporary backup seal.

8. Blow-out Proof Stem

The stem is designed with a step at its bottom ensuring that the media in the valve cavity cannot blow out the stem due to excessive pressure.

9. Anti-Static Device

In order to prevent friction between the ball and stem from causing a spark during operation of the valve, the TM Series valves are assembled with a static-conduction spring as standard ensuring electrical continuity between the ball, stem, and body. In this manner, static electricity is conducted to the ground and system safety is ensured.

10. Metal-to-Metal Seating Technology

Flo-Tite TM Series valves can be supplied with metal seats. These valves are engineered for severe service conditions such as extreme temperatures or pressures as well as abrasive medias. Flo-Tite works closely with our customers to design valves tailored to their specific needs. Knowledge of applications, materials, and design criteria allows our engineers to find solutions quickly and effectively. Selecting the correct materials and plating surfaces are the keys to overcoming a wide variety of application problems. Hard Chrome Plating, Tungsten Carbide, and Stellite are some of the commonly used materials in Flo-Tite's metal-seated valves.

11. Bore Options

Full port, reduced or standard port options are available according to customer's requirements. TM Series full bore ball valves can be used in service lines that require periodic pigging.

12. Stem Extensions

According to installation or operation requirements, the valve stem may be extended upon request. This design is suitable for buried service or underground applications.

The stem extension length can be manufactured to meet customer requirements. Extended stems help provide protection of personnel in high temperature service applications as well as providing more ready operation in less accessible installations.

13. Valve Vent and Drain

TM Series valves are usually supplied with a vent valve located in the upper part of the body and a drain plug located in the lower part of the body. Smaller size valves may have a vent/drain valve located in the lower part of the body only.

14. Flexible Operation

The standard stem bearings are impregnated with Teflon that is both low friction and self-lubricating to reduce valve operating torque. This allows for the valve to be operated for long periods without the need of injected lubrication grease.

15. Various Operators Available

The valve top works are designed in accordance with ISO 5211, which makes the installation of various operators easy and convenient. The common operators are lever handle, wrench operated, worm gear operated, or pneumatic, electrical, or hydraulic automated assemblies.

16. Extensive Polymeric Seating Options

Flo-Tite TM Series ball valves are available with a wide range of soft seat and hybrid seal options. Flo-Tite's engineers work closely with our seal manufactures utilizing modern techniques to develop new unique seat and seal options for a variety of applications. Flo-Tite is an innovative industry leader in developing new sealing technologies.

17. NACE Compliance

TM Series ball valves are supplied as standard in materials that meet the requirements of NACE MR-01-75. Strict material control and inspection during the manufacturing process ensures compliance.

18. Multi-Port Designs 3 and 4 Way

The TM Series multiport trunnion ball valves offers savings in both cost and space over the use of multiple valves. It is offered in all available body and trim materials as well as soft seated and metal seated options.

Torques shown in these tables are to be used as a guide for actuator selection. Additional requirements may be imposed by media characteristics, trim, and frequency of valve operation. A safety factor of 1.25 is recommended for actuator sizing.

These torques are based on the standard construction with RPTFE/Nylon/Delrin/Devlon seats for all sizes of class 150, 300 and sizes 2" to 16" of class 600, Devlon seats are used for sizes 18" and larger class 600 and for all sizes of class 900, 1500 & 2500.

Flo-Tite Rebuild Kits

Complete soft goods repair kits are available for prompt delivery. The parts can be easily identified by the model number located on the valve tag. We can also offer replacement balls and stems by request.

Our Mission

Flo-Tite Valves and Controls is committed to delivering the highest quality of products that meet or exceed all industry standards with on-time deliveries at an excellent price.

Cryogenic Service Ball Valves

Flo-Tite has a Cryogenic Service trunnion mounted ball valve for temperatures below -50F. We utilize different seat and packing materials including Kel-F. These valves come with extended bonnet/stem assemblies as per industry standards.

The valve pictured on the left is a 10" Class 600 Trunnion used for a -300F Cryo service application.

Dimensions / Weights

TM Multiport Series Series Class 150 & Class 300 Full Port Design

Model Numbers

TM-MPF15 Class 150
 TM-MPF30 Class 300

Typical Flow Plans

3 Way T Port 90°

Flow Plan D

Flow Plan F

3 Way L Port 90°

Flow Plan A

4 Way LL Port 90°

Flow Plan M

180° Turn & Other Flow Plans Available, Consult Factory for additional information.

FLO-TITE'S TM Series Valves Are Available For Most Piggable Applications

Flo-Tite TM Series valves are offered as standard with an adjustable packing gland in size 2" - 12". This feature eliminates the need for removal of automation equipment when stem packing requires a field adjustment.

Flo-Tite offers a complete package of pneumatic, hydraulic & electric actuators. All types of controls & accessories for a vast number of special automated applications are also available.

Selection, Installation, Operation and Maintenance

Although Flo-Tite can, and often does, provide general guidelines, it is not possible to provide application specific data and warnings for all conceivable applications. The purchaser/end user must therefore assume the ultimate responsibility for the proper selection, installation, operation and maintenance of the products. Before installing, operating or repairing any valve, the purchaser/end user should train its employees and/or contractors in the safe use of the Flo-Tite products in connection with the purchaser's manufacturing processes.
