

STEAMIX® Steam & Water Hose Stations & Mixing Units

Model 2031—Standard

STEAMIX 203 Steam/Water Mixing Valve of brass/stainless steel (SS) construction.

STEAMIX® Model 2031 is supplied as standard with 3/4" inlet union connections with integral strainers, an outlet ball valve for flow control and an outlet dial thermometer. The unit is supplied fully assembled, pressure-tested.

Safety Features

- Steamix 203 will not pass live steam.

In the event of either a complete failure of the inlet cold-water supply or a reduction in cold-water pressure to below 20 (+/-5) psi (1.4 bar), STEAMIX will respond with a complete shutdown of outlet flow.

Locking set (included)

- If there is a structural failure of the primary operating component (diaphragm), STEAMIX will "fail safe" to cold water.
- To prevent over-temperature selection by the user and the potential for overheated water and flash steam presentation common with other types of hose stations, STEAMIX is supplied with a single-temperature locking set.

Technical Specifications

- 3/4" (20 mm) NPT inlets/outlet(s)
- Brass/stainless steel construction
- Operating pressures
 - Maximum: 150 psi (10 bar)
 - Minimum: 20 psi† (1.4 bar)
- Maximum pressure loss ratio 10:1††
- Inlet check valves required
- Weight: 32 lbs (15 kg)

† **IMPORTANT NOTE: Lower steam pressures significantly reduce outlet flow rates.**

†† Ratio of inlet pressures accounting for restrictions on valve outlet (minus back pressure).

Flow Rates

The capacity charts indicate STEAMIX 203 flow rates at steam and water pressures commonly available in the average manufacturing plant. The STEAMIX 203 can handle a wide diversity of pressures and temperatures. Three typical outlet temperatures shown in the flow tables were selected to demonstrate the valve's flow rate at:

- A) "User safe" temperature (approx. 120°F - 48°C)
- B) "Hot hose down" temperature (approx. 150/160°F - 65/71°C)
- C) "Common bacteria kill" temperature (approx. 180°F - 82°C)

NOTE: All flow rates shown are with open outlet, and a reduction of flow is to be expected depending on the length and diameter of outlet pipework, washdown hose, spray nozzle, etc.
